AA Meetings Interface

The AA meetings interface will bind popup pins to the meetings' lat-long values on a Leaflet map of Manhattan. Meetings will be filtered by day and time to show all meetings in the remaining part of the day. Popups will show meeting information including: group, location, wheelchair access, start/end time, type and special interest. The default view will be centered on Parsons. It is assumed the viewer will have a modern browser with internet connectivity, the ability to read English, and not be overly colorblind.
